

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. (original) A method for energy consulting, comprising the steps of: (a) collecting data on energy usage from at least one customer and energy system supply data from a plurality of suppliers; (b) calculating and reporting the availability and costs of energy systems which accommodate some or all of the energy usage expected by the customer; (c) receiving a commitment from the customer to purchase at least one energy system; and (d) arranging the purchase and installation of the purchased energy system.
2. (original) The method of claim 1, in which the data on energy usage comprise data on historical or anticipated electric power usage, climate, site resources and energy generation preferences.
3. (original) The method of claim 1, in which the energy supply data comprise data on energy generation systems available from a plurality of suppliers, and costs of installation, operation and maintenance of the systems.
4. (original) The method of claim 2, in which the data on site resources comprise data on customer geographic location, orientation of structures, access to an electric power grid, availability of sunlight, availability of space for photovoltaic cells, availability of wind, availability of space for wind turbines, availability of hydrogen-based fuels, availability of space for fuel cells, applicable utility tariffs and applicable governmental regulations.
5. (original) The method of claim 1, in which the costs are determined from the energy system supply data, the energy usage data and anticipated aggregated purchase commitments from a plurality of customers.

6. (original) The method of claim 3, in which each energy generation system comprises at least one of the following technologies: photovoltaic, wind turbine, fuel cell, batteries, geothermal, passive solar, biomass, and micro-hydro systems.

7. (original) The method of claim 1, in which each customer comprises any one of the following: private homeowner, multiple dwelling unit owner, business owner, government, governmental agency, refugee assistance project, disaster-relief project, economic development project and foundation.

8. (original) The method of claim 2, in which each site comprises any one of the following: private home, multiple dwelling unit, business structure, government structure, governmental agency structure, refugee assistance project, disaster-relief project, economic development project and foundation.

9. (original) The method of claim 1, in which the data on energy usage is collected interactively from an Internet Web site.

10. (original) The method of claim 1, in which the data on energy usage is collected interactively from a computer.

11. (original) The method of claim 1, in which the steps of collecting and calculating are performed using at least one computer, and the data is collected in at least one database.

12. (original) The method of claim 1, in which the customer is kept informed of changes or new developments in available energy systems, costs and financing options through automatic email alerts.

13. (original) The method of claim 1, in which the need to visit the customer's site is time-shifted until after the customer has committed to purchase an energy generation system.

14. (original) The method of claim 1, in which calculating and reporting the availability and costs of energy systems is based on aggregating the demand for components across differently situated customers, e.g. residential, business, disaster-relief, refugee assistance, economic development.

15. (original) The method of claim 1, in which arranging the purchase and installation of the purchased energy system includes automating the process of matching customers with trained specialists, such as specifiers, installers, and/or electricians.

16. (original) The method of claim 1, in which energy consulting includes the marketing of non-polluting energy generation systems.

Al 17. (currently amended) The method of claim 1, in which the costs of energy systems are reduced by organizing customers in the database or environmental organizations to advocate politically for regulatory changes, by inviting customers to participate in lobbying activities designed to persuade their local government to enact incentives that will lower the price of energy systems for them, or to enact legislation to require their local utility to buy back, at the retail rate, energy generated without causing pollution.

18. (currently amended) The method of claim 1, in which the number of potential customers is increased by organizing customers in the database or environmental organizations to advocate politically for regulatory changes which reduce the cost of energy systems, by inviting customers to participate in lobbying activities designed to persuade their local government to enact incentives that will lower the price of energy systems for them; or to enact legislation require their local utility to buy back, at the retail rate, energy generated without causing pollution.

19. (currently amended) The method of claim 1, in which the number of potential customers is increased by using the benefits to society of non-polluting energy systems to facilitate organizing

customers, volunteers, politicians, and celebrities to generate unpaid publicity and advertising of the website, by inviting others to participate in outreach programs and in spreading messages regarding energy alternatives through volunteer work, referring others to the system, or participating in generating additional press and publicity.

20. (currently amended) The method of claim 1, in which the costs of energy systems are reduced by using the benefits to society of non-polluting energy systems to facilitate organizing customers, volunteers, politicians, and celebrities to generate unpaid publicity and advertising of the website, by inviting others to participate in outreach programs and in spreading messages regarding energy alternatives through volunteer work, referring others to the system, or participating in generating additional press and publicity.

21. (original) The method of claim 1, in which the costs of energy systems are reduced by reducing the costs of customer acquisition by encouraging the customer to contribute contact information of others via the website in return for a commission on sales resulting from such others.

22. (original) The method of claim 1, in which the costs of energy systems are reduced each time the underlying technologies (photovoltaic, fuel cells, wind turbines, etc.) undergo technological improvement and the newer more capable or less costly variations are added to the energy system supply data.

23. (currently amended) A computer-assisted system for energy consulting, comprising: (a) an interface configured to collect energy usage data from at least one customer for at least one site; (b) a database configured to collect energy system supply data from a plurality of suppliers; (c) a computer-implemented system for calculating and reporting the availability and costs of energy systems that accommodate some or all of the energy usage expected by the customer; (d) a system for receiving a commitment from the customer to purchase at least one energy system; and (e) a system for arranging the purchase and installation of the purchased energy system.

24. (original) The system of claim 23, in which the data on energy usage comprise data on historical or anticipated electric power usage, climate, site resources and energy generation preferences.

25. (original) The system of claim 23, in which the energy supply data comprise data on energy generation systems available from a plurality of suppliers, and costs of installation, operation and maintenance of the systems.

26. (original) The system of claim 24, in which the data on site resources comprise data on customer geographic location, orientation of structures, access to an electric power grid, availability of sunlight, availability of space for photovoltaic cells, availability of wind, availability of space for wind turbines, availability of hydrogen-based fuels, availability of space for fuel cells, applicable utility tariffs and applicable governmental regulations.

ai 27. (currently amended) The system of claim 23, in which the ~~costs are determined~~ system for calculating and reporting the availability and costs of energy systems includes means for determining costs from the energy system supply data, the energy usage data and anticipated aggregated purchase commitments from a plurality of customers.

28. (original) The system of claim 25, in which each energy generation system comprises at least one of the following technologies: photovoltaic, wind turbine, fuel cell, batteries, geothermal, passive solar, biomass, and micro-hydro systems.

29. (original) The system of claim 23, in which each customer comprises any one of the following: private homeowner, multiple dwelling unit owner, business owner, government, governmental agency, refugee assistance project, disaster-relief project, economic development project and foundation.

30. (currently amended) The system of claim 23, in which ~~each~~ said site comprises any one of the following: private home, multiple dwelling unit, business structure, government structure, governmental agency structure, refugee assistance project, disaster-relief project, economic development project and foundation.

31. (currently amended) The system of claim 23, in which the ~~data on energy usage is collected interactively from an Internet Web site~~ interface configured to collect energy usage data comprises an interactive Internet Web site.

32. (currently amended) The system of claim 23, in which the ~~data on energy usage is collected interactively from a programmed computer~~ interface configured to collect energy usage data comprises a programmed computer.

33. (currently amended) The system of claim 23, in which the ~~steps of collecting and calculating are performed using at least one computer, and the data is collected in at least one database.~~ database comprises a computerized database.

Al 34. (currently amended) The system of claim 23, ~~in which the customer is kept informed further including means for keeping the customer informed~~ of changes or new developments in available energy systems, costs and financing options through automatic email alerts.

35. (currently amended) The system of claim 23, ~~in which the need to visit the customer's site is time-shifted until after the customer has committed to purchase an energy generation system.~~ further including means for time-shifting the collection of energy usage data until after the customer has committed to purchase an energy generation system.

36. (currently amended) The system of claim 23, in which the system for calculating and reporting the availability and costs of energy systems ~~is based on~~ includes means for aggregating the demand for components across among differently situated customers, e.g. residential,

business, disaster-relief, refugee assistance, economic development.

37. (currently amended) The system of claim 23, in which the system for arranging the purchase and installation of the purchased energy system includes means for automating the process of matching customers with trained specialists, such as specifiers, installers, and/or electricians.

38. (currently amended) The system of claim 23, ~~in which energy consulting includes the further~~ including means for marketing of non-polluting energy generation systems.

39. (currently amended) The system of claim 23, ~~in which the costs of energy systems are reduced by~~ further including means for reducing the costs of energy systems, including means for organizing customers in the database or environmental organizations to advocate politically for regulatory changes, including means for inviting customers to participate in lobbying activities designed to persuade their local government to enact incentives that will lower the price of energy systems for them, or to enact legislation require their local utility to buy back, at the retail rate, energy generated without causing pollution.

40. (currently amended) The system of claim 23, ~~in which the number of potential customers is increased~~ further including means for increasing a number of potential customers by organizing customers in the database or environmental organizations to advocate politically for regulatory changes which reduce the cost of energy systems, including means for inviting customers to participate in lobbying activities designed to persuade their local government to enact incentives that will lower the price of energy systems for them, or to enact legislation require their local utility to buy back, at the retail rate, energy generated without causing pollution.

41. (currently amended) The system of claim 23, ~~in which the number of potential customers is increased~~ further including means for increasing a number of potential customers by using the benefits to society of non-polluting energy systems to facilitate organizing customers, volunteers, politicians, and celebrities to generate unpaid publicity and advertising of the website, including

means for inviting others to participate in outreach programs and in spreading messages regarding energy alternatives through volunteer work, referring others to the system, or participating in generating additional press and publicity.

42. (currently amended) The system of claim 23, ~~in which the costs of energy systems are reduced~~ further including means for reducing the costs of energy systems by using the benefits to society of non-polluting energy systems to facilitate organizing customers, volunteers, politicians, and celebrities to generate unpaid publicity and advertising of the website, including means for inviting others to participate in outreach programs and in spreading messages regarding energy alternatives through volunteer work, referring others to the system, or participating in generating additional press and publicity.

43. (currently amended) The system of claim 23, ~~in which the costs of energy systems are reduced~~ by further including means for reducing the costs of customer acquisition by way of means for encouraging the customer to contribute contact information of others via the website in return for a commission on sales resulting from such others.

a 44. (currently amended) The system of claim 23, ~~in which the costs of energy systems are reduced~~ further including means for reducing the costs of energy systems each time the underlying technologies (photovoltaic, fuel cells, wind turbines, etc.) undergo technological improvement and the newer more capable or less costly variations are added to the energy system supply data.

45. (original) A method for marketing energy-related products or services, comprising the steps of: (a) using a Web site to collect data from at least one customer of energy-related products or services and to collect data from a plurality of suppliers of energy-related products or services; (b) calculating and reporting the availability and costs of energy-related products or services; and (c) encouraging the customer to contribute contact information of others via the Web site in return for a commission on sales resulting from such others.

46. (currently amended) A computer-assisted system for marketing energy-related products or services, comprising ~~the steps of~~: (a) means for using a Web site to collect data from at least one customer of energy-related products or services and to collect data from a plurality of suppliers of energy-related products or services; (b) means for calculating and reporting the availability and costs of energy-related products or services; and (c) means for encouraging the customer to contribute contact information of others via the Web site in return for a commission on sales resulting from such others.

47. (original) A method for creating markets for non-polluting energy generation technologies, comprising the steps of: (a) collecting data on energy usage from at least one customer and energy system supply data from a plurality of suppliers; (b) calculating and reporting the availability and costs of energy systems which accommodate some or all of the energy usage expected by the customer; (c) receiving a commitment from the customer to purchase at least one energy system; and (d) arranging the purchase and installation of the purchased energy system.

 48. (currently amended) A computer-assisted system for creating markets for non-polluting energy generation technologies, comprising ~~the steps of~~: (a) means for collecting data on energy usage from at least one customer and energy system supply data from a plurality of suppliers; (b) means for calculating and reporting the availability and costs of energy systems which accommodate some or all of the energy usage expected by the customer; (c) means for receiving a commitment from the customer to purchase at least one energy system; and (d) means for arranging the purchase and installation of the purchased energy system.

49. (original) A method for marketing, consulting on, analyzing and implementing distributed, non-polluting electric power generation systems, comprising the steps of: (a) collecting data from a plurality of suppliers on the availability and costs, at various levels of demand aggregated across multiple customers, of electric power generation systems; (b) collecting data on historical

electric power usage or projected electric demand, site resources, climate and electric power generation system preferences from at least one customer; (c) developing specifications of available electric power generation systems appropriate for the customer from the usage, demand, site resources, climate, preference, supply and cost data; (d) reporting at least one proposed installation of an electric power generation system to customer that is cost-effective and generates less pollution than customer's current systems and soliciting approval of such proposal; (e) receiving a commitment from the potential customer to purchase at least one electric power generation system; (f) scheduling an energy specifier visit to the customer's site for analysis, documentation, and confirmation of the proposed installation of the purchased electric power generation system; (g) receiving a confirmation from the specifier of the practicality and cost-effectiveness of the installation of the purchased electric power generation system; and (h) scheduling installer and electrician visits to the customer's site to complete installation, testing and activation of the purchased electric power generation system.
